

To avoid having an asterisk (or footnote number) after the author's name or chapter title, please leave out the footnote marker from <author> or <title> in the <book-part-meta>, so instead of having

```
<author>John Smith <xref ref-type="fn" rid="FN000001"><sup>*</sup></xref></author>
```

code it as

```
<author>John Smith</author>
```

while in the <fn-group> of the <back> the footnote is there:

```
<fn id="FN000001"><label>*</label><p>John Smith is affiliated with ...</p></fn>
```

This footnote is therefore not anchored.

The same applies to chapter titles:

```
<title>Boundary Crossings in the Pre-modern Islamicate World<xref ref-type="fn" rid="FN000001"><sup>1</sup></xref></title>
```

```
<title>Boundary Crossings in the Pre-modern Islamicate World</title>
```

```
<fn id="FN000001"><label>1</label><p>This chapter ...</p></fn>
```
